

# Wide-Format Services

Wide-Format printing is used to create large posters, signs and other oversized two-dimensional prints. Using both digital and ink-jet technologies, the latest wide-format printers can generate an impressive variety of products more cost-effectively than ever before.

Wide-Format prints can be tailored for either indoor or outdoor use, and can be enhanced with special lighting if needed. Common interior applications include signage in stores, banks, restaurants, movie theatres, or motivational / informational posters in any corporate environment. Outdoor applications include sale and directional signs, advertising for buses and taxis, and public access area signage.

## FLEXIBLE OPTIONS

Wide-Format technology offers a broad selection of materials, from high gloss or matte photo paper and canvas to clear or specially coated vinyl or acetates for back lighting.

## MULTIPLE MOUNTING OPTIONS

Wide-Format prints can be mounted on chipboard, foam board, magnet-receptive and dry erase boards, many different plastics, and a variety of adhesive-backed materials.

## BRANDING TO SCALE

CORE-4 service includes system-wide color management, which means your wide-format products will maintain color consistency and brand integrity for all of your designated products.
